

Haydn Van Norman

Computer Science

Student at Arizona State
Graduating 2023

480 809 5247
haydnav@gmail.com
<https://github.com/haydnvn>

With Courses in:

Computer Organization, Digital Design, Data Structure and Algorithms, Sustainability, and Geology

Skills

Python, C/C++, Java, Computer Architecture

Agile, Git, SQL

Browser Automation, Data Mining, Web Scraping

Experience

Amazon / Central Operations Associate

April 2021 - PRESENT, Tempe

Work on order exceptions via a mission control ticketing system to monitor Wholefoods and Amazon Fresh global grocery delivery issues and action them efficiently. Using computer skills and customer service to aid in order assignment and customer satisfaction while prioritizing speed and accuracy.

Target / Service Advocate

July 2017 - March 2021, Gilbert

I advocate both physical and digital services and solutions. Working with features that drive adoption, usage and ultimately guest loyalty. I am empowered to make shopping effortless and seamless for guests.

Projects

Reddit Commenting Bot / 2021

A bot designed to periodically comment on a subreddit of users choosing. The original purpose was to comment on a cryptocurrency forum that would pay all users who commented a share of a currency every month. The idea was enough comments would gain 1-2 votes and eventually be paid out.

Built in Python using PRAW API library

In Video Sponsor Skip Chrome Extension/ 2022

Collects user inputted data to add skippable portions of youtube videos that would normally be unskippable as the video maker added them in not Youtube. (this area is missed by all other ad blockers).

Uses web scraping and Youtube API. Built in HTML5/Javascript
